

ST OSWALD'S C OF E ACADEMY

FOUNDATION 2 SCIENCE

By the end of F2 I will have added to my sticky Science knowledge to include:

Plants

I can explain what I can see, hear and feel when exploring the natural world.

I can recognise and talk about how some habitats look different to our own and describe some of the plants that I would find there.

I can describe how the natural world looks different at different times of the year.

Animals including humans

Healthy snacks are better for me than unhealthy ones and I can make sensible choices.

Screen time is enjoyable, but I know I also need to mix this with sensible, physical activities to stay healthy.

Cleaning my teeth twice a day and having good sleep habits help to keep me healthy.

Crossing roads can be dangerous and I know how to behave when walking round the village and how this is different to how I might behave in school or in the garden.

Everyday Materials

I can talk about my ideas about how things work using new vocabulary.

I can suggest how to make something and what materials I could use that would be suitable giving simple reasons why.

Communicating ideas

I can use subject vocabulary such as forces, twisting, fast, slow to make simple observations.

I can ask questions about things I have observed such as why do some objects sink and others float.

I can make some predictions about what might happen in new situations using vocabulary I have learned, and then test to see if I am right.
